CMCM GUI – Cross References

CMCM – Other Features

- Reconnect at any time
- Edit/delete nodes or cross-references with right-click
 - change title or color
 - make cross-references bi-directional
 - can only delete nodes without dependencies like sub-branches or cross-references
- Move nodes via drag&drop
- Hover over node or cross-reference to see who made the last change

CMCM: Collaborative Mind- and Concept Mapping

- Download and install from <https://uol.de/se?cmcm>
- Requires Java 8 and JavaFX (included in download)

Hands-On Session: Case

- Create a Mind Map about collaborative modeling
- Setup
 - register
 - login
 - open the current version of the Hands-On Session model (*async. modeling*)
- Model (*sync. modeling*)
 - create branches for the main topics
 - create sub-branches for sub-topics
 - create cross-references where appropriate
 - modify existing elements (title, color, position)
 - delete existing elements (leaf nodes, cross-references)
 - undo/redo a local change
 - communicate with other users to agree on design decisions
 - determine the current "owner" of an element before modifying it
